DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 5-10, drawn to a DNA molecule encoding an aldolase, and a recombinant plant cell containing such, classified in class 435, subclass 419.
- II. Claims 11-15 and 19-22 drawn to a transgenic plant and method of making, classified in class 800, subclasses 278 and 317.2.
- III. Claims 16-17 and 23 drawn to a food product made from the potato plant of Group II, classified in class 426, subclass 615.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are patentably distinct and mutually exclusive. They have different modes of operation, different functions, and different effects, such that the DNA of Group I could not, by itself, lead to a plant of Group II, and the plant of Group II does not require the specifics of the (any generic) plant cell of Group I.

Furthermore, the food product of Group III may be made by another materially different process, such as that of another potato or starchy plant product.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
